Syringa reticulata, Japanese tree lilac
Viburnum, multiple species. Shrubs that mature to tree like proportions.

Native species are denoted with asterisks. Natives are often preferred due to their adaptation to New Jersey climate, disease resistance, and benefits to native butterflies and song birds. When planting small trees near the foundation of your home, it is wise to place at least 10' from the house. Even smaller trees need space as they grow. This list should serve as a guide and is no means a definitive list.
